LOCATION

Hyderabad, India

ARCHITECTURE

Microservices · Distributed systems · Design Patterns Event-driven · Secure APIs

LANGUAGES

Java · Python · Spring Boot · Quarkus · Hibernate

MESSAGING & DATA

Kafka · Oracle · CockroachDB

CLOUD

AWS · Docker · Kubernetes · Terraform

SECURITY

Snyk · SonarQube · Vulnerability remediation

DEVOPS

Jenkins · GitHub · Bitbucket · Maven

OBSERVABILITY

Splunk · Prometheus · Grafana

AI ENGINEERING

Agentic AI · Claude · GitHub Copilot · MCP Servers

VIDEO ENGINEERING

Nginx · FFmpeg · Cloudflare

TESTING

JUnit 5 · Mockito

EDUCATION

B.Tech, Computer Science & Engineering
JNTU Kakinada · 2007–2011 · 70%

Senior Java engineer with 14 years building large-scale enterprise and product systems, including a year as Lead Engineer at FastPix. I build microservices, Kafka event-driven systems and secure APIs on AWS, Kubernetes and Terraform. At JP Morgan Chase I designed an AI-agentic secure-code solution and build MCP-connected workflows. Moving into architecture and engineering leadership.

SYSTEMS DESIGNED AND BUILT

1. **Monolith to microservices** · Spring Boot, Quarkus
   Decomposed monolithic applications into smaller, independently deployable services. Defined service boundaries and secure REST API contracts so services can be built, tested and released independently, and modernized frameworks along the way.
2. **Kafka event-driven platform** · Kafka
   Designed secure REST APIs and Kafka-based event-driven architectures for high-throughput, real-time data flows. Covered event and topic design, producer and consumer behavior, and failure handling so downstream services stay decoupled and data stays reliable.
3. **AI-agentic secure-code solution** · JP Morgan Chase
   Designed an AI-agentic solution that identifies vulnerabilities and delivers secure code inside internal engineering workflows. The agent finds security gaps, proposes remediation and returns fixes through existing developer tooling, working with Snyk and SonarQube findings.
4. **MCP-connected AI workflows** · Claude, MCP servers
   Built hands-on AI workflows that connect Claude to multiple MCP servers, so an agent can read, decide and act across tools in one flow. Covered tool selection and sequencing, passing context between servers, and keeping each workflow limited to the access it needs.
5. **Video streaming platform** · FastPix
   As Lead Engineer, led engineering for a video platform, covering media processing and delivery with Nginx, FFmpeg and Cloudflare, and owned technical decisions and delivery for the team.
6. **Cloud and delivery automation** · AWS, Kubernetes, Terraform
   Containerized services with Docker and ran them on Kubernetes and AWS, with infrastructure defined as code in Terraform. Automated build and deployment with Jenkins, GitHub and Maven, and added Splunk, Prometheus and Grafana for monitoring and troubleshooting.
7. **Database migration and upgrade** · Oracle, CockroachDB
   Planned and executed database migrations and upgrades as controlled transitions of live systems, with data integrity as the first requirement.

LEADERSHIP AND DELIVERY

- Led engineering as Lead Engineer at FastPix, owning delivery and technical decisions; ran Agile delivery from sprint planning to release coordination.
- Drove framework adoption, modernization and engineering standards across applications.
- Set quality and security gates with SonarQube and Snyk; turned requirements into technical specifications with stakeholders.

CAREER HISTORY

Senior Associate
JP Morgan Chase · Nov 2024 – Now

Senior Software Engineer
EPAM, Poland · Sep 2022 – Sep 2023

Senior Software Engineer
Tech Mahindra · Sep 2016 – Sep 2017

Associate Software Engineer
CGI · Jul 2012 – Sep 2015

Lead Engineer
FastPix · Sep 2023 – Oct 2024

Senior Associate
JP Morgan Chase · Oct 2017 – Aug 2022

Software Engineer
EBIX · Sep 2015 – Sep 2016
